

# How to Use Insight from create screen

## Feature Overview

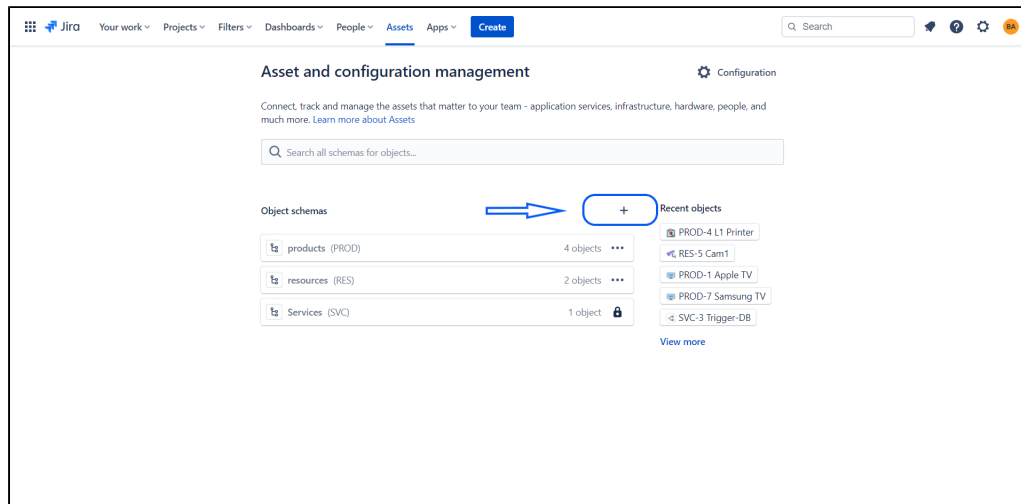

Assets in Jira Service Management is a Premium and Enterprise only feature. It is compatible only with company-managed projects.

Insights bring agile metrics, out of Jira reports, and right to where teams plan and track their work.

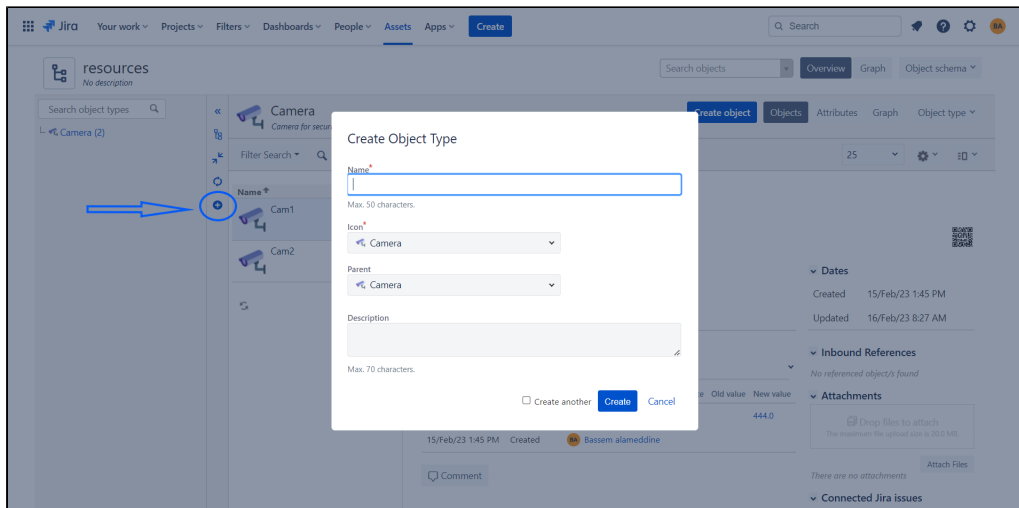

- Click on Assets in the menu

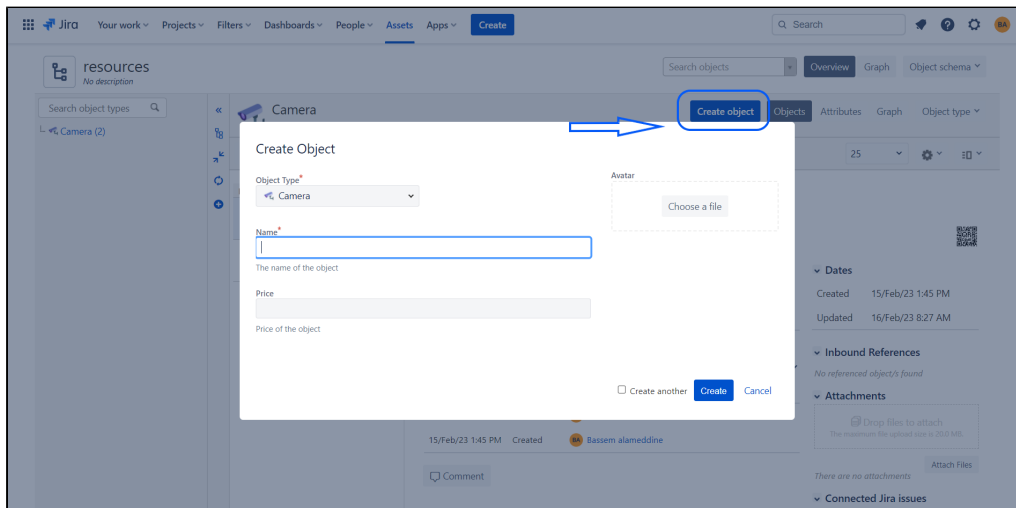

- Click on the + icon to create an Object schema

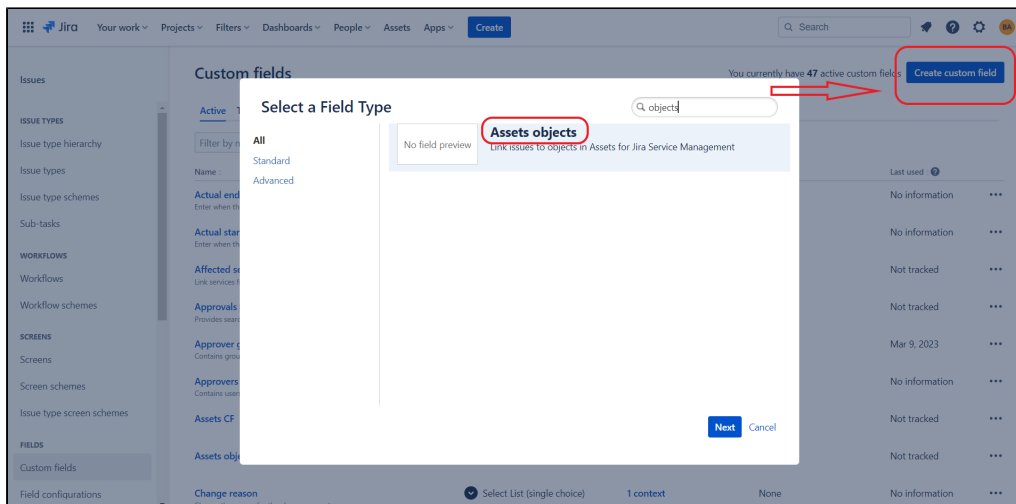

- Click on the created Object schema, and then you can create object type

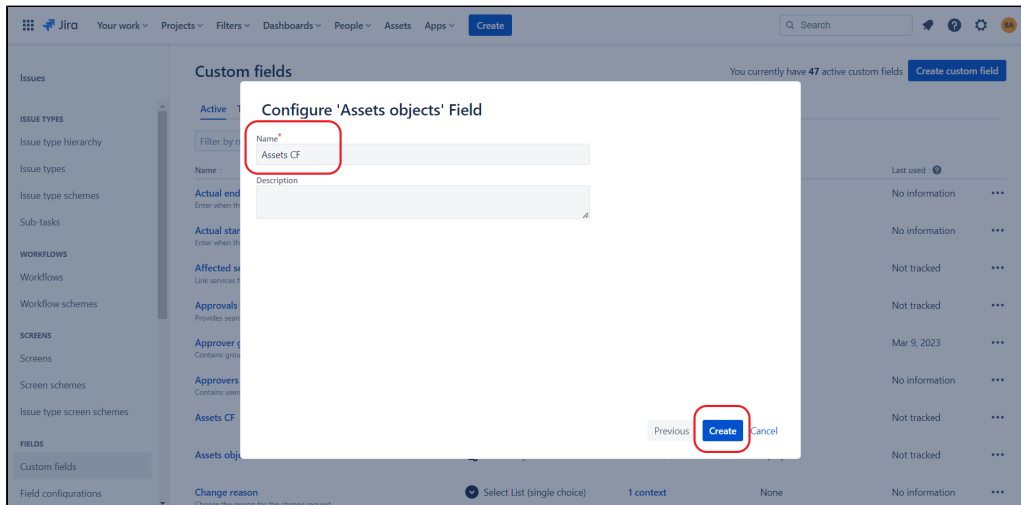

- Create object under the object type that you have created

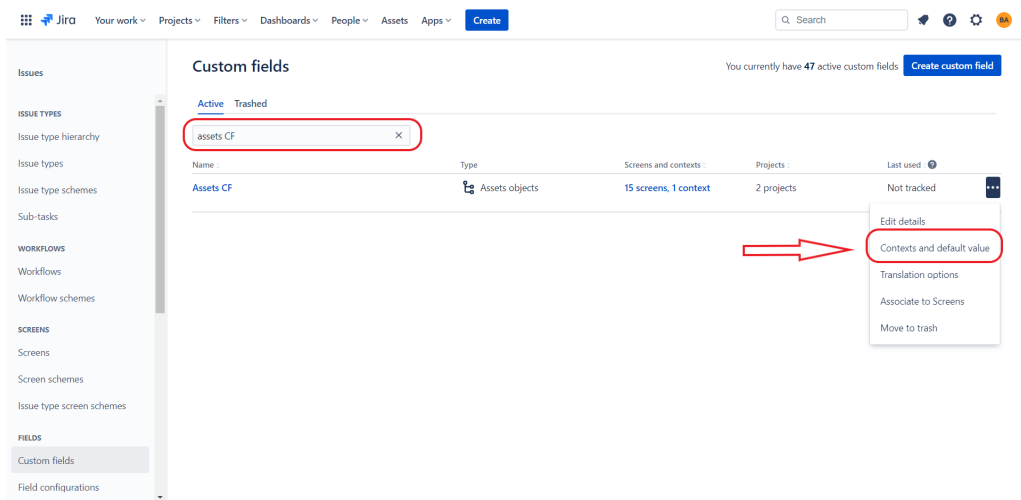

- Go to Custom fields and click on **create custom field**, and search for Assets objects

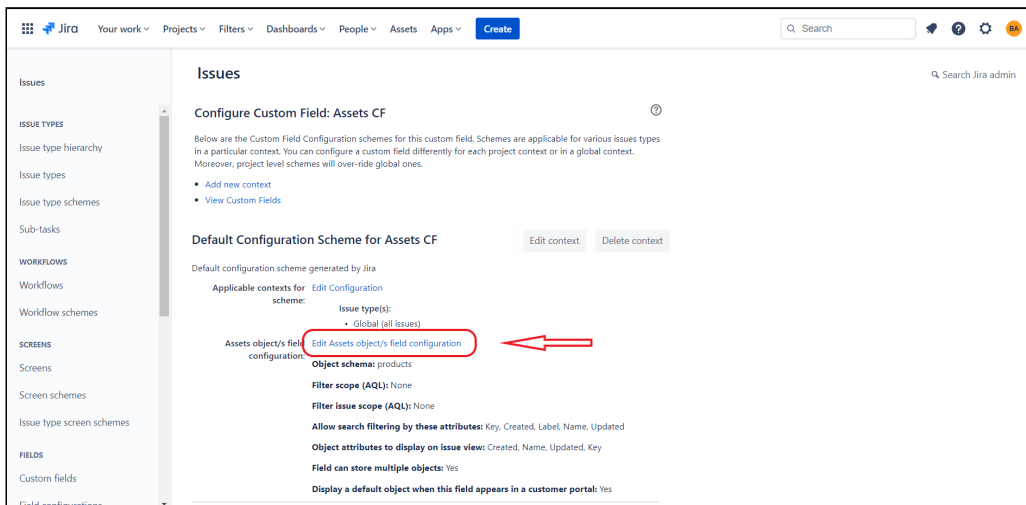

- Name your Asset custom field and click on create button

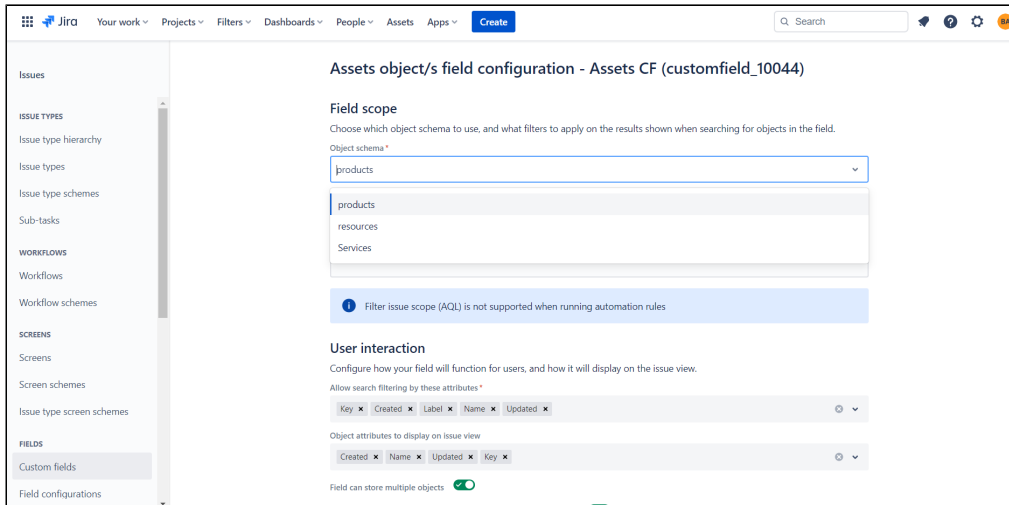

- Click on **Custom fields** in the left menu, search for the Asset field that you have created before and then click on **context and default value**

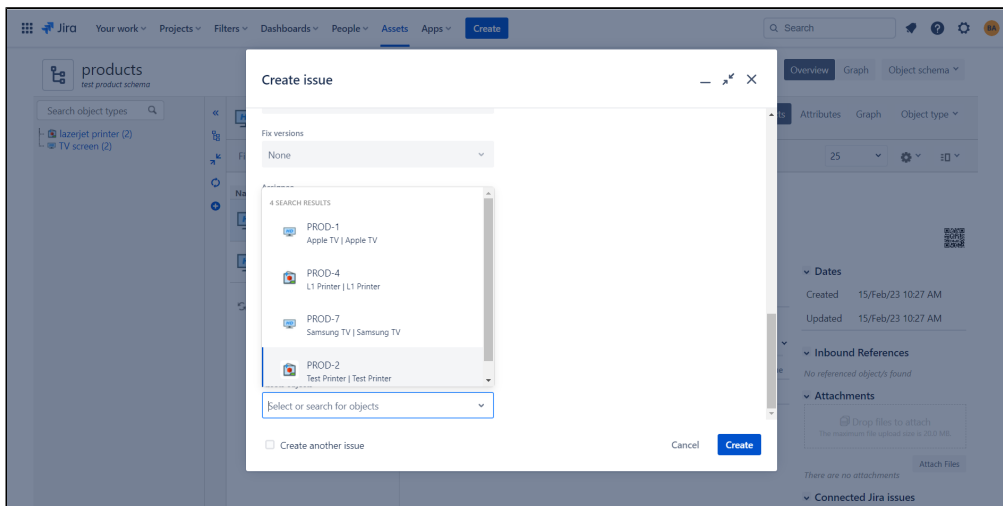

- Click on **Edit Assets object/s field configuration**

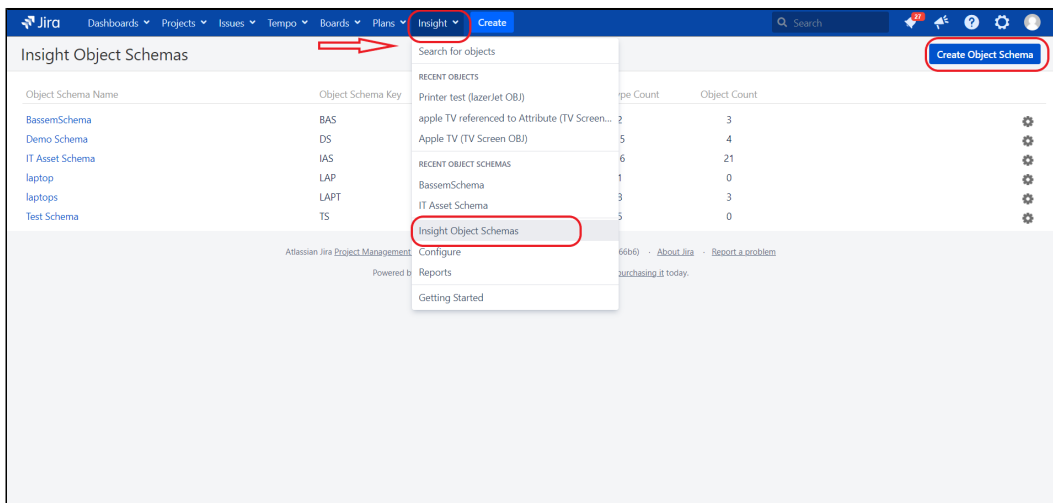

- Choose which object schema to use, and what filters to apply on the results shown when searching for objects in the field.

- Click on **Create** to create a new issue, you can find the Asset field and its data

- From the top menu, select **Insight**. Rest of steps are the same as cloud steps

- Creating an issue and assigning assets to it
