

# How to Edit Request from Bundle Features

To add the needed configurations from the web you can follow this documentation <https://docs.appsvio.com/feature-bundle/features/edit-request>.

In terms of JSMobile, the feature can be accessed only on DC versions of Jira so far, to edit a request you must follow the below steps:

- As we know this feature is configured to specific request types, so you need to open the appropriate request and in the 3 dots you'll find the edit request functionality added if the user fulfills the requirement

- ↔ Escalate
- ↔ Resolve this issue
- ↔ Cancel request
- + Add Comment
- ✎ Edit Request
- 🔗 Share
- 🔔 Don't notify me
- 🔗 Share request link
- 📋 Copy request key to clipboard

- Clicking on edit request will redirect the user to the edit screen, where it fetches the added fields by the admin.
