

v.1.0.68-AC

💡 New Features:

- Introduced a user-friendly onboarding flow that simplifies application configuration and enables administrators to quickly get started
- Revamped issue glance design to include user information, voice recordings, and separate sections for created tickets

✅ Improvements & Bug Fixes:

- The authentication Token field now acts as a secure entry field
- Renamed Twilio fields to align with Twilio's naming convention
- Added phone number field on the confirm page
- No license screen will appear on all newly added sections when the license expires
- Resolved loading behavior issue during transitions between steps
- Fixed 'Next' button bug not being disabled when no request type or resolution status was selected
- Fixed page numbering bug
- Fixed voice notes appearing in unrelated WhatsApp tickets bug
- Resolved search issue using lower letter cases
- Updated documentation and screenshots to improve user experience
- Implemented code improvements and refactoring for better performance
