

How to add a custom field to a team-managed project

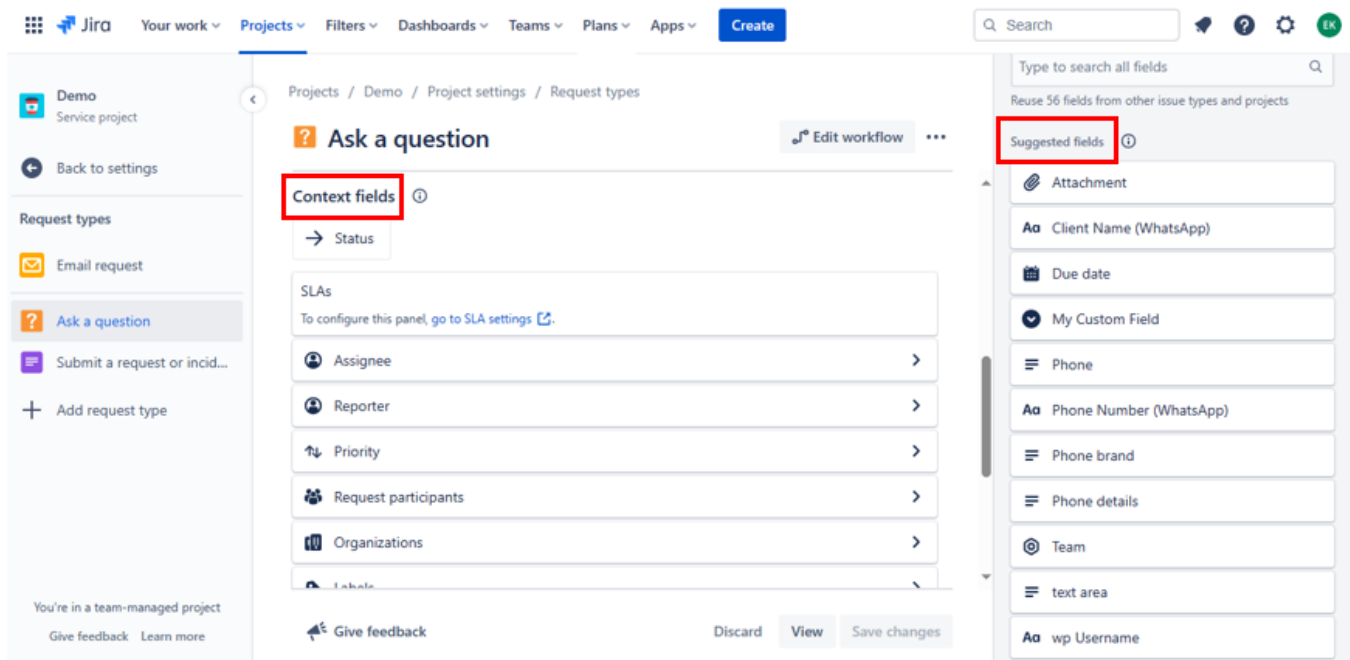

Learn how to add the existing custom fields to your team-managed project.

Follow these steps:

- Go into your team-managed project.
- In the left panel, scroll down and click on "Project Settings".

- After the page loads up, in the left panel, click on "Request Types".
- In the "Request Types" page, scroll down in the main screen till "Context Fields".
- And in the right panel, scroll down till "suggested fields" until you can see all the custom fields.

- Now, you have to drag and drop both custom fields "Client Name (WhatsApp)" and "Phone Number (WhatsApp)" from the "suggested fields" to the "Context Fields".
