

## 5.0.1 - Latest

In this latest release of Microsoft Outlook for Jira, we've dedicated our efforts to fine-tuning and enhancing your user experience. Here's a snapshot of the key improvements and fixes:

**1. Uploading Images and Edit Screen Preview:**

- Addressed an issue where images weren't uploading correctly, ensuring a seamless process.
- Fixed the preview issue on the edit screen for a more reliable editing experience.

**2. Customer Portal Image Upload:**

- Resolved the challenge of images not being uploaded properly on the customer portal screen, ensuring smooth customer interactions.

**3. Multiple Image Insertion Issue:**

- Fixed the problem related to inserting multiple images on server instances, providing a more intuitive image-handling capability.

**4. Create Screen Tab Switching:**

- Resolved the issue with tab switching in the create screen, ensuring a more fluid navigation experience.

**5. Work Log Validation and Default Value:**

- Addressed the work log required field validation and default value issue, enhancing accuracy and usability.

**6. Tempo Fields Enhancement:**

- Improved the integration with Tempo fields for enhanced time management capabilities.

**7. Email Description Display:**

- Fixed the display issue related to email descriptions in the editor, ensuring accurate representation.

**8. Existing Issue Pop-up:**

- Resolved the pop-up issue related to existing problems, providing a smoother workflow.

**9. Calendar Data Integration:**

- Fixed the integration issue with calendar data, ensuring optimized synchronization.

**10. Arabic Language Enhancement:**

- Enhanced support for the Arabic language, providing a more refined and localized experience.
