v32

We're thrilled to announce the latest release of GTJ Jira Connector! This update brings exciting improvements to data management, system compatibility, and overall performance.

Key Highlights:

- **Expanded System and Custom Fields Support:**

  We've significantly increased the range of data types you can manage within GTJ. You can now directly from the create screen leverage:

  - **Linked Issue**: Establish relationships between issues for better context and traceability.
  - **Log Work**: Log work to issues efficiently.
  - **Labels**: Organize and categorize data with flexible custom and system labels.
  - **Components, Versions, Fix-versions, and Resolution fields:** Add version, component, or set a resolution easily.
  - **Environment**: Tailor workflows and configurations to specific environments.
  - **Cascading Select & Select List**: Select your option from pre-defined lists.
  - **Group Picker**: Group the related data options for easier selection.
  - **User & Version Picker**: Effortlessly assign users and versions with Pickers.
  - **Request Participant**: Involve specific users in issue resolution effectively.
  - **Project Picker**: Link issues to relevant projects with ease.
  - **Time Tracking**: Add remaining time on tasks directly within GTJ - create screen

- **Refactored Codebase:**
  We've undertaken a comprehensive code restructuring to enhance performance, stability, and future expansion capabilities.
- **Bug Fixes:**
  This release addresses several reported bugs to improve overall user experience and reliability.

Happy exploring! Experience the benefits of enhanced data management and improved performance with this latest release.
